**Boxplots of width of 95% credible intervals associated with projected active cases (L), cumulative cases (C) and cumulative deaths (R).**

Projections are from October 16 to December 31, 2020, based on training data for India from March 18 to October 18, 2020.
Supplementary Table S1 describes parameter values used to generate these projections in detail.

Data Source: covid19india.org
Note:
- We do not include active case or cumulative death projections from the baseline or SAPHIRE as those projections are not available.
- We do not include active or cumulative case projections from the ICM model it yields only total (reported + unreported) case counts.
